

Sheet Products Keep With Green Initiative

KYDEX, LLC, a worldwide leader in specialty thermoplastic sheet manufacturing, has launched KYDEX 311 and KYDEX 351 MB. Created in response to customer requests for superior product at competitive prices, these materials are symbolic of KYDEX's industry-leading culture of innovation. In keeping with KYDEX's green initiative, both products contain reclaimed content as a result of an environmentally friendly, closed-loop manufacturing process.

The success of KYDEX 311 immediately led to the development of KYDEX 351 MB, which features the added benefit of Microban antimicrobial protection. Microban inhibits the growth of bacteria that can cause stains, odors and product deterioration. An integral part of the sheet, it won't wash or wear away, keeping the surface fresher between cleanings for the entire life of the product.

KYDEX 311 and KYDEX 351 MB share many high-performance features:

- Cost competitive with fire-resistant ABS (FR-ABS) formulations
- Impact resistant
- Excellent fabrication qualities with good part definition
- Offered in thicknesses from 1.5 to 8.9
- Less hygroscopic than FR-ABS (typically do not require pre-drying)
- Excellent resistance to a broad range of corrosive chemicals and cleaning solutions
- UL recognized STD 94 V-0/5V
- Available in a wide range of colors
- Color-matched, co-extruded top layer with a black-colored substrate for dark colors and an off-white-colored substrate for light colors
