

## **Digital Microscopy System Provides 2- And 3-Dimensional Measurement**

Olympus America Inc., Scientific Equipment Group - Industrial Microscopes has signed an agreement with Hirox-USA Inc. to distribute the Hirox KH-7700 Digital Microscope system in the United States. The KH-7700 is an all-in-one portable digital microscopy system that is designed to provide observation, recording, and measurement for industrial and quality applications in such fields as medical device manufacturing. It provides 2- and 3-dimensional measurement, display, and real-time tiling for creating large composite images. It also offers quick extended depth of field, 360° rotational viewing, auto-calibration, and both video and still imaging. Finally, it has a super-high-dynamic-range feature and supports local area network (LAN) configurations. The KH-7700 joins a comprehensive family of imaging-based systems and solutions for industrial applications already offered by Olympus across the U.S.
