

# Printers Provide USB 2.0 High-Speed Data Transfer

Tharo Systems Inc.'s H-Series printers have multiple interfaces for every application. Blazing fast USB 2.0 is standard on the THARO H-400 and H-600 Series printers for high-speed data transfer from Windows PC, Apple Mac, Linux, or Unix system to an H-Series printer. With a high data transfer rate, data can be transferred faster to the THARO H-400 and H-600 printers in cases where graphics or TrueType fonts will be used, or where each label is different. The higher the data transfer rate, the greater the throughput. Parallel and RS232 Serial are also included, or the optional Ethernet Adaptor can be used to print to the H-400/H-600 from anywhere in the world.
