Rack Cases Provide Easy Handling

METCASE, the metal enclosures division of OKW, has introduced the 'METTEC' 19" rack cases. These versatile enclosures feature an attractive front bezel which incorporates unique 'comfort handles' for easy handling.

Typical applications will include industrial computers, laboratory instruments, industrial control systems, and more.

This exclusive and robust range of aluminum 19" rack cases conforms to DIN 41594 and IEC standards and is available in three standard heights: 1U, 2U and 3U, and depths of 6.574", 10.511" and 14.448". The front bezel is painted in light gray and the case body is pre-treated with an anticorrosive finish. Internal guide rails are included in the side extrusions for mounting PCB assemblies and chassis plates.

Uniquely, the anodized aluminum front panel can be removed while the case is still in the rack. The front panel kit includes two ABS cover trims, which hide the fixing screws. The front panel is also recessed for location of a membrane keypad. Other accessories include chassis plates and a rack mounting kit.

METCASE offers a full customizing service on these enclosures with bespoke sizes, CNC punching, milling and drilling, silk-screen printing and much more, providing fully finished enclosures ready for fitting the electronic components.
