

Load Cell Designed to be Hermetically Encapsulated

HBM introduces the load cell PW25 specifically designed to be hermetically encapsulated. HBM Inc. provides state-of-the-art transducers, strain gages, load cells, amplifiers, and assemblies for use in medical devices, dynamic weighing, and scale applications. Specializations include multi axis force and blade pressure sensors for medical pumps, custom strain gages for turning customer supplied parts into active sensing components, and scale assemblies for patient weighing and center of gravity calculations.
