

Silicone Suction Cups Handle Parts Without Marking

Anver silicone suction cups contain no dyes or impurities and are offered in a wide variety of shapes and sizes for handling medical parts and others that must remain clean. Designed for use in high-speed pick-and-place and packaging applications, these silicone vacuum cups are rated for use up to 600°F and do not leave a trace or mark after lifting gently from the top. Available in round and oval shapes to match the surface area of the parts being handled, the silicone suction cups are offered in sizes from 1.0-mm diameter and up, with various depths and bellows to match a user's application. A full range of fittings, spring suspensions, tubing, and vacuum pumps to fit EOAT (end of arm tooling) and packaging machinery are also offered.
