

System Offers Testing For Oxygen Headspace, Leak Detection, Seal Strength

MOCON Inc. is introducing the MultiCheck 300—a first-of-its-kind system that measures oxygen headspace coupled with leak detection and seal strength.

MOCON has married two separate technologies—its Lippke 4000 series (leak detection/seal strength) and its hand-held Pac Check 302, O₂ headspace analyzer to create the MultiCheck 300 combination unit. The objective is to provide packagers with an all-in-one system that reduces the resources (time, labor, samples) needed to conduct three separate tests.

The MultiCheck 300 unit is ideally suited for a broad spectrum of medical products that are shelf life sensitive. It can be used to test a wide variety of packages including flexible, rigid, composites, etc.
