

High Speed CMM

The Werth Inspector FQ is an extremely fast measuring machine with linear drives. Positioning speed is up to 1,000 meters/second with acceleration speed of 10 meters/second². It comes standard with zoom optics and can be outfitted with additional sensors, such as touch probes and laser scanning. For even faster utilization, it can be used in the “Measure OnTheFly” mode, capturing measurement data while the machine remains in constant high speed motion.
