

Six Inch Wide 300 DPI With Ethernet Label Printer

The Tharo Systems Inc. H-600 Series, 6-inch wide, thermal transfer bar code label printers have a suggested list price of \$2,245 USD for 203 DPI and \$2,445 USD for 300 DPI, and feature a durable all metal construction with a cast aluminum center wall for added strength. The large media window allows for easy viewing and monitoring of supplies. Standard features include a high-speed USB 2.0 interface for super-fast data transfer, a Real-Time Clock for time and date stamping of labels, and Ethernet Adapter. Along with all of these standard features, the Tharo H-600 Series printers also ship with a free version of Tharo Systems' EasyLabel Start software for custom designing and printing labels. Options include cutter, internal rewind with stripper sensor, and applicator interface.

Best of all, no PC is necessary; download the label formats to the printer's flash memory, unplug the printer from the PC, plug in a standard PC keyboard, take the printer to another location, and start printing.
