

Industry Proven 4" and 6" Wide Label Printers

The Tharo Systems' H-400/H-600 Series thermal transfer product identification and bar code label printers, available in 203 or 300 DPI, feature a durable, all metal construction with a cast aluminum center wall for added strength. The large media window allows for easy viewing and monitoring of supplies. Standard features include a high-speed USB 2.0 interface for super-fast data transfer and a Real-Time Clock for time and date stamping of labels. The standard Stripper Sensor on the H-400 Series can be used for either strip-and-peel or tear-off applications. The H-600 Series come standard with an Ethernet Adapter (wired). Along with all of these standard features, the Tharo H-Series printers also ship with a free version of Tharo Systems' EASYLABEL® Start software for custom designing and printing labels. Options include: Cutter, Internal Rewind, Ethernet Adapter (H-400 Series), and Applicator Interface. Best of all, no PC is necessary—download your label formats to the Printer's Flash Memory, unplug the printer from the PC, plug in a standard PC keyboard, take the printer to another location and start printing.
