

Dry Ice Cleaning

Traditional cleaning methods in the medical device manufacturing industry can be time consuming, ineffective and costly. Dry ice blast cleaning is a quick, efficient and environmentally friendly alternative. Cold Jet dry ice cleaning allows medical device manufacturers to clean intricate molds and micro-cavities while staying within high tolerances. Dry ice cleaning is able to quickly deflash and deburr parts as well as clean clamping devices. Precision dry ice blast cleaning is the perfect way to improve your medical device manufacturing processes.
