

Fabrico's Proprietary Process Delivers Clear Printing on Tape

Fabrico, a leader in flexible materials converting and advanced assembly for complex projects, offers precise printing on tape for identification, warning, and instruction in high-performance markets.

Fabrico uses a flexographic printing system that prints directly on the backings of printable tapes. A proprietary process prevents the transfer of water-based or UV inks from backing materials to the attached adhesives as the tape is unrolled. Information can be printed in letter and numerical format and in multiple colors for color coding. Tape rolls can be slit to custom widths and ordered in different lengths.

Fabrico works with you to ensure that printed tape rolls meet your application's requirements with high quality, durable printed tape solutions.

In addition Fabrico provides printing capabilities for industrial, specialty, UL and bar code labels, using a wide range of other materials, including laminates, foams, and custom pressure-sensitive labels. Fabrico can also provide custom printing for membrane switches and metal or polyester nameplates.
