

Fine Magnet and Enamel Wire Stripper

Eraser's Model RT2S Fine Magnet Wire Stripper will strip film type insulations including Formvar, ML, enamel, varnish, isonel, and more from 28AWG to 48AWG. The conical wheels rotate at high speed to generate frictional heat which softens the insulation on the wire. The machine features a strip length stop which allows for consistent strip lengths, a dust take off port for environmental safety and close-up, multiple wire stripping capability. The unit also cleans and polishes leads of small electronic components and removes oxidation and other contaminants from leads as small as 0.0012" diameter.
