

Horizontal Flow Wrapper

The Campbell Pioneer

Horizontal Flow Wrapper features a sanitary modular design with cantilevered components. Cutting head, film, and infeed servo motors with timing belt drives provide reliable, maintenance-free operation. The Allen-Bradley ControlLogix 5000 Series PLC provides exceptional control of machine functions. User-friendly touchscreen operator interface includes product information, alarms, warning messages and production data. Machine can be quickly and easily adjusted for product and/or wrapping material changeover, often without the use of tools. Up to 40 product records can be stored for retrieval through the PanelView Plus 700 touchscreen operator interface. The electrical package includes CE / UL approved “touch-safe” components, and quick disconnect sensors and actuators. The Pioneer is designed to wrap medical devices and general packaging applications at speeds up to 250 packages per minute.
