

Cyclo Olefin Polymer Syringes

Qosina now stocks Medallion syringes (#C1116 - #C1126) made from Cyclo Olefin Polymer (COP). Offered with either an ABS or PC plunger, the 20 ml syringes are available in an array of colors and come with a silicone plunger tip. The ABS plunger version is BPA-Free, while the PC plunger has a high heat resistance and is compatible with steam, gamma, or ETO sterilization. Both have excellent purity and extremely low residual metals (less than .02 ppm). A 1 ml syringe in blue is also available with either a PC or ABS plunger (#C1127, #C1128).

The COP syringe has a high moisture barrier which helps to protect against moisture loss from materials within the barrel. These syringes also offer good chemical resistance to acids, bases, alcohols and fragrances. Color matched polycarbonate caps (#65315 - #65321) are available to match the syringe plunger color. From pad printing on the barrel to custom sized and colored plungers, Qosina can work with your product design team to modify the Medallion COP syringe to meet your needs.
