

Snap-in Panel-Mount Connectors with Dip Solder Contacts

Binder-USA has expanded the Series 720 snap-in panel-mount receptacles to now offer dip solder contacts. This addition provides more options for applications requiring a direct assembly to a printed circuit board. The snap-in connectors are ideally suited for commercial and medical applications because of their quick connect and disconnect feature.

The snap-in receptacles are designed with an all plastic shell that has an outer diameter of 16 mm. Male and female versions are offered with 3, 5, 8 or 12 gold-plated contacts. The connectors are IP67 rated when properly installed and mated ensuring the connection is protected from liquids and debris.

Mating field-attachable connectors and cordsets are available for a complete snap-in connecting solution.
