

Class 1 Division 2 LED Light

Larson Electronics Magnalight announced the addition of a small form factor Class 1 Division 2 LED light. Measuring just under 3.5 inches outer diameter, the HAL-7W-LED seven watt hazardous location LED light is applicable for small area coverage.

Larson Electronics announced the addition of the HAL-7W-LED for small area hazardous location lighting. While more hazardous location fixtures are typically large, the seven watt HAL-7W-LED's compact design enables designers and operators can fit this light into panel and instrument enclosures where larger hazardous lights won't fit. Priced around \$200, the HAL-7W-LED is both UL and CSA certified for Class 1 Division 2 Groups A, B, C and D and comes with an adjustable yolk mount.

"We have had a great deal of demand for smaller UL listed fixtures for hazardous area lights, and with a 3.5 inch outer diameter, the HAL-7W-LED meets the requirement," said Rob Bresnahan with Larson Electronics' Magnalight.com. "This light can be used as a small area flood light or short distance spotlight for operators working with equipment in hazardous areas."
