

Domed Labels Provide Depth and Dimensionality

Custom domed labels that provide a durable and colorful alternative to injection molded or stamped 3-dimensional nameplates have been introduced by Nameplates For Industry, Inc. of New Bedford, Massachusetts.

NFi Domed Labels provide depth and dimensionality to create an aesthetic appearance for branding and identifying high-value products and equipment.

Featuring a high-gloss, non-yellowing, weather-proof, and scratch-resistant finish, doming incorporates a two-part urethane combined with a substrate and an adhesive engineered to match customer application requirements.

Suitable for indoor and outdoor applications, NFi Domed Labels can be produced in custom shapes with bright colors, images, and metallic inks. When scratched or dented, the urethane surface heals itself to retain a smooth finish. Available in 1/4" sq. up to 6" x 18" sizes, these durable labels meet SAE (Society of Automotive Engineers) specifications.

NFi Domed Labels are priced according to construction and quantity. Price quotations and free samples are available upon request.
