

Cost-Effective, High-Performance Gear Reducer

MDT Staff

The new Able VRB Gear Reducer is an excellent alternative for OEMs that need a cost-effective, high-performance gear reducer. The high-precision and torque handling capabilities are an ideal fit for packaging machinery, medical equipment, and assembly cell automation.

The standard mounting is a through-bolt style and the unit is a dimensional replacement for a few competitive models. The maximum output torque peaks at 2,300 in-lbs. The VRB provides high-precision backlash rating of <3 arc-minutes as its standard, which means the unit provides exceptional accuracy and loading for a good value.

The Able VRB Gear Reducers ship in < 2 weeks.
