

Two-Way High Flow Electronic Valves

MDT Staff

Clippard Minimatic Electronic valves and manifolds provide a complete system for efficient interface with electric and electronic circuits for many applications.

The standard models provide an air flow of 1.4 scfm @ 100 psig, more than twice the flow of Clippard's trusted EC/EV/ET valve series. Optional 1.1 scfm @ 50 psig and 0.95 scfm @ 25 psig flow models are also available.

The valves are precision-built 2-way Normally-Closed control valves, utilizing a unique valving principle with no sliding parts. Complete poppet travel is a mere 0.007" resulting in low power consumption and exceptionally long life.

Manifold and in-line mounting are available as well as many different electrical connection styles. Oxygen Clean and Analytical versions are also available as well as FKM, EPR and Silicone seals, and diodes.
