Luer Fitting Replacement

MDT Staff

The new 10 Series Couplings from LinkTech (Venture, CA) offer the ideal replacement for a luer fitting. These couplings are LinkTech's smallest connectors yet with a new twist lock feature that is intuitive to use and makes an audible click when coupled. Their new and improved "Easy Grip Barrel" provides an ergonomic handle with a non-slip more secure grip and reliable connection every time. With 1/16"-1/8" tubing sizes, these connectors allow easy tubing rotation and prevent kinking or unintentional disconnection.

These couplings are particularly well suited for use on medical applications such as blood pressure cuffs. This standard product range offers 50+ new styles, which includes in-line and panel mount hose barb configurations in both white and black color Acetal (POM) as well as almond colored medical grade Polypropylene.
