

Non-Phthalate Plasticizer Portfolio

MDT Staff

Eastman Chemical Company today announced it will expand its non-phthalate plasticizer portfolio with the addition of Eastman 168 SG (sensitive grade) non-phthalate plasticizer. Eastman 168 SG non-phthalate plasticizer is an enhanced grade of the industry-leading Eastman 168 non-phthalate plasticizer. This new plasticizer is specifically targeted for highly sensitive applications such as medical devices.

For medical device original equipment manufacturers, Eastman 168 SG is a non-phthalate plasticizer that offers the best combination of price and efficiency in the market. The plasticizer can be used as an alternative to di-ethylhexyl phthalate (DEHP), and it offers easy replacement for DEHP and tris (2-ethylhexyl) trimellitate (TOTM) and is more efficient than using some of the other non-phthalate plasticizers available. Eastman 168 SG has clean toxicological and regulatory profiles while remaining cost-efficient.
