

Pre-Assembled Hemostasis Valve with Sideport Tubing & 3-Way Stopcock

MDT Staff

Qosina (Edgewood, NY) is pleased to introduce the addition of three new Hemostasis Valves with sideport tubing connection to a 3-way stopcock. The Hemostasis valve features an automatic pre-slit seal, which eliminates the need for manual rotation. The valve also offers a rotating male luer lock with a vented female luer lock cap. The stopcock features 2 female luers, a tube connection and a male luer lock cap. Tubing 7.5 inches in length connects the valve and stopcock of these pre-assembled, non-sterile components.

Qosina is a worldwide supplier of thousands of stock OEM disposable components to the medical and pharmaceutical industries including connectors, luers, caps, clamps, adapters, clips, valves, needle hubs, stopcocks, hemostasis valves, tuohy borst adapters, swabs and spikes. Qosina operates an ISO 9001 and ISO 14001 registered facility.
