

# 2mm Shrouded Male Connectors

MDT Staff

Mill-Max has added 2mm pitch products to their family of shrouded male pin connectors for higher density applications. Like our .100" pitch series, these connectors are effective where a robust, secure connection is demanded, such as frequently mated interconnects and blind mate situations. These double row connectors come in 4 to 100 pin configurations and are available in through-hole, right-angle and surface mount termination styles.

The shroud of the connector extends above the pins affording full protection during handling, assembly, connecting and disconnecting. Further, the shroud limits the amount of misalignment between connectors during mating and de-mating - acting as a guide for blind mate applications. Mill-Max also offers a mating socket, P/N: 833-13-XXX-10-002000, which is keyed to provide a polarized connector pair when mated with any of the shrouded headers.
