

MDrive Delivers More

MDT Staff

Lexium has introduced their MDrive to benefit a wide range of motion applications with its compact all-in-one design saving space, reducing wiring and improving machine reliability. In addition, robust new design features and performance enhancements deliver even more, where MDrive products were great before.

LMD products with internal encoder also operate in closed loop mode using hMTechnology. hMT blends stepper and servo motor benefits, while eliminating negatives such as loss of synchronization or stalling. And a variable current control feature may reduce heat, save energy and lower operating costs in a wide variety of motion applications.
