

New Best in Class Additions to Micro Brushless Motor Series

MDT Staff

MICROMO has announced the new 8 and 10 mm brushless motors from the FAULHABER Group. These two new, extremely compact brushless DC servo motors combine power, robustness and high-resolution feedback in a unique way. This innovative drive concept underlines FAULHABER's successful tradition in the area of micro drive technology and complements the range of brushless 'mini' DC servo motors, with diameters ranging from 6 to 12 mm.

High continuous torque, 1.1 and 2.1 mNm respectively, and an extremely flat slope of the n/M motor curve in compact dimensions make these motors ideal for highly demanding applications with high performance requirements in limited space. MICROMO provides a complete, flexible systems solution. The motors can be used with a wide variety of FAULHABER Group encoders, gearheads and speed and motion controllers.
