

# Compact SMD Fuse with Extended Currents

MDT Staff

Schurter has expanded its successful UMF 250 SMD fuse series with nine additional rated currents. The extension completes the series with a total of fourteen rated currents, ranging from 500mA to 10A. The compact, quick-acting SMD fuse now provides over current and short circuit protection in primary and secondary circuits for an even wider range of applications.

The UMF 250 fuse is ideal for voltages up to 250 VAC and 125 VDC. It features a high breaking capacity of up to 200A at rated voltage. The 3 x 10.1 mm surface mount fuse is a compact SMD alternative to traditional 5x20 mm cartridge fuses. The location of the markings on the square shaped fuse displays important specifications such as approvals, current ratings and voltages.
