

32 mm Planetary Gearhead for High Radial Loads

MDT Staff

maxon motor has added two new gearheads to the already successful GP 32 program. Significant improvements have been made to the single-stage planetary gearhead: The planetary carrier has been reinforced, the bearings have been repositioned, and a ceramic version is now available.

With these new gearhead versions for high radial loads, maxon is now offering single-stage gearheads with extremely heavy-duty radial bearings. These versions are designed for applications such as toothed belt drives, applications that place enormous stress on the output stage due to the radial forces at work. The design of the GP 32 AR and GP 32 CR gearheads takes these forces into account.
