

## Custom Orifices in Standard Plastic and Metal Fittings

MDT Staff

Industrial Specialties Mfg.

(ISM) has long been in the custom fittings business for both assemblies and orifices. New upgrades in technology however, have recently simplified the ISM processes to customize these types of products, typically with quick production turn-around and delivery.

Orifices control flow and speed of the air or liquid which passes through the fitting. ISM makes custom orifices that have been found to be beneficial to many engineers and OEM's. These individuals are able to design a product using standard size fittings without having to compromise on proper flow objectives.
