

Thermoplastic Compounds for Extruded Sheet, Profile, and Film

MDT Staff

LTL Color Compounders has introduced a new product line, ColorFast X Series—a proprietary thermoplastic compounds for extruded sheet, profile and film applications. The ColorFast X Series product line, which includes fully formulated compounds as well as performance and color masterbatch, is specifically formulated for monolayer and multi-layer extrusion applications. Available features include excellent weatherability, high opacity, high or low gloss, chemical resistance, scratch resistance and substrate versatility. LTL Color Compounders, Inc., offers a customized solutions approach by tailoring products to process and application needs.

ColorFast X Series compounds are currently available in the following resins: ABS, ASA, PMMA, and PA6 for use in monolayer or multi-layer structures. These compounds are formulated for use over a wide range of substrates including ABS, HIPS, PA, PC/ABS, PP, PVC and TPO. Masterbatch formulations are available for use with preferred base resins to provide customized performance enhancements including color, gloss modification, and scratch improvement.
