

# High Performing Miniature Pumps

MDT Staff

Servoflo Corporation of Lexington, Massachusetts has announced the M Series of high performing miniature pumps. Designed for delivering small amounts of liquids, these centrifugal-based pumps are extremely small and quiet.

Viton seals are standard, with options for alternative seal materials and wetted parts to make them resistant to most chemicals and solvents. Waterproof and submersible versions are available. The pumps use push-fit connectors designed for 3.2 mm tubing. A 220 mm electrical fly lead is fitted as standard.
