Ductless Fume Hood

MDT Staff

The new Purair 5 Ductless Fume Hoods from Air Science USA feature a high level of operator protection where routine work is being carried out. The units exceed OSHA, ANSI and all relevant international standards.

The Ductless design eliminates installation costs and allows the unit to be positioned over a sink or benchtop apparatus. There are three models available with a choice of 24", 36" or 48" widths. The units operate at low noise levels and because they recirculate, they do not exhaust expensive conditioned and/or heated air into the atmosphere.
